

**Idea: Devhub hosts remote repositories**

# Task 1: I want to get my app into the Marketplace

Remote (on Devhub)

Local (on local machine)

## Task 2: I want to update the description of my app

### Local (on local machine)

Update manifest  
to contain  
new description

Changes are automatically  
synced to Marketplace repository

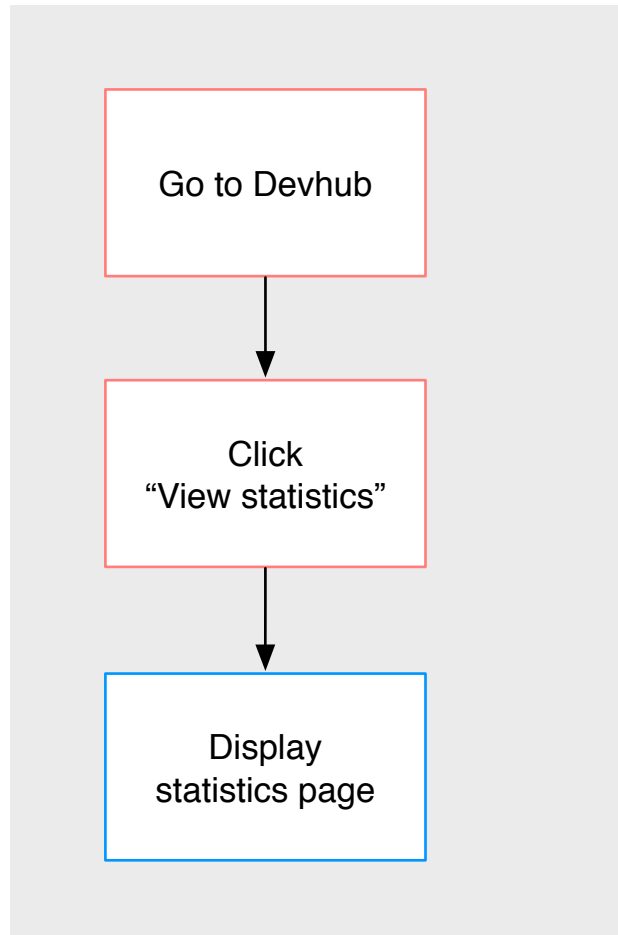

#### Key

Performed by developer

# Task 3: I want to see how many times this app has been installed

Remote (on Devhub)

## Key

Performed by developer

Performed by system

# Task 4: I want to publish a new version of my app

Remote (on Devhub)

Local (on local machine)
